20 New Project

Safe, Swift, Reliable

Can 1+1 be more than 100?

The answer is: YES

DEX+FX

Creating millions worth of value

And what we need to do is...

**Seize the opportunity,
Take advantage of the trend!
Give your dreams a chance in
2021!**

Forex, it's the first choice for investing platform today

The world's largest transaction, the most liquid financial market

More than 8 Trillion daily transaction volume

Rakuten Securities will list commodity CFDs on May 17

Rakuten Securities, Japan's leading currency pair and CFD broker, announced that it will expand its CFD product lineup and will provide commodity CFDs on May 17, 2021.

Rakuten Securities will first promote the CFD on gold and silver. The launch date of crude oil CFDs has not yet been determined.

Rakuten Securities customers will be able to trade their latest commodity CFDs on the MT4 platform. The leverage ratio is 1:20. In the middle of this month, Rakuten Securities also launched Coinbase stock trading products.

European Open : China's GDP growth rate has reached the highest level in history

European Open : China's GDP growth rate has reached the highest level in history

In the past few weeks, real yields in the United States have continued to fall, dragging the dollar down. Traders have begun to accept this statement because the Fed insists on patiently withdrawing stimulus measures.

Although it may be difficult for real yields to fall further, unless inflation expectations accelerate upward, the US dollar's weakening again is also due to other central banks starting to step on the stimulus pedal, causing the interest rate differential between the US dollar and the US dollar to begin to widen.

General Trend: Foreign exchange is the first choice for global investment and financial management today

High liquidity and volatility: Liquidity refers to the fact that there is a lot of money flowing in the market more than 8.5 trillion U.S. dollars per day. Therefore, it only takes one second to open and close a position. Volatility refers to the fact that foreign exchange rates generally vary widely. You can take advantage of price changes to make profit at any time convenient for you. It can be said that you can make money whether you buy up or down!

The BEST tool to realize your dreams and financial freedom

All trading operations are completed through the network. Investors do not need a fixed place to conduct foreign exchange transactions, realizing online transactions
Convenient, effective and fast.

The foreign exchange market is open 24 hours a day-you can trade anytime you want!

Reduce transaction costs. Forex brokers pay far less than other securities such as stocks.

The ability to use leverage allows you to trade with an amount greater than your deposit, increasing your potential income.

Cryptocurrency: A new form of asset class is gradually entering the mainstream financial platform

5000+ Digital asset Market Value: 1.89 Trillion

Since the first publication of the "Bitcoin: A Peer-to-Peer Electronic Cash System" white paper in 2008, as of July 2020, there are more than 5,000 digital assets available for trading on the market, with 23,280 trading markets, with a total value of \$1.89 trillion.

Digital assets can carry out multiple functions such as value transferring.

Uses digital "currency" for value transfer

(For example: Bitcoin, Ripple,

As fuel for smart contracts

(Example: Ethereum)

Act as a secondary currency

- A. Identity token
- B. Securities
- C. Stablecoin

Coinbase IPO, the market value broke 100 billion!

1. Coinbase has adopted a direct listing method to list on NASDAQ, and it is also the first publicly listed stock in the history of NASDAQ trading.

2. NASDAQ announced that Coinbase's IPO reference price is

3. 250 US dollars, the total market value has reached an astonishing 65 billion US dollars.

4. After the market opened, its stock price soared by more than 70% to reach US\$429 per share, and its market value once exceeded US\$110 billion after dilution.

Bitcoin has been rated as the best investment target in the past decade by many global mainstream financial media

- Bitcoin was first traded on May 22, 2010, at a price of 0.3 cents.
- The price of Bitcoin reached an **all-time high of \$60,000 on April 14, 2021**, and the return rate since its issuance has exceeded **26 million times**.
- Bitcoin's current transaction price is higher than its mining cost (\$6,000), although it is still 65% lower than its peak price, but the annualized rate of return has reached 110% in the past ten years.

Advanced FX YIELD MANAGER Engine

Advanced FX YIELD MANAGER Engine

GIBX new generation trading system adopts advanced FX Yield Manager engine, trading and data visualization applications, providing trading, market data, charts and analysis functions, which can be customized according to your needs, bringing a simpler and easier-to-use user experience.

GIBX is based on new technology and supports the popular functions of other products. Users can use charts and better graphics, such as heat maps, account monitoring, and so on.

The screenshot shows a detailed data table within the FX Yield Manager interface. The table has multiple columns, including 'Symbol', 'Quantity', 'Price', 'Value', 'Bid', 'Ask', 'Spread', 'Volume', 'Turnover', 'Market Share', and 'Liquidity'. The data is organized into a grid, with rows representing different market instruments or currencies. The table is scrollable and provides a comprehensive overview of the trading activity.

Symbol	Quantity	Price	Value	Bid	Ask	Spread	Volume	Turnover	Market Share	Liquidity

The World's Unmatched MT5 LP MAM+5A Hedging Module

The screenshot displays the MetaTrader 5 interface with several key components:

- Market Watch:** Shows bid and ask prices for major currency pairs like EURUSD, GBPUSD, USDCHF, USDJPY, and AUDCAD.
- Navigator:** Lists account structures under 'GIBCapitalGroup-Live', including five 'GIB 50m' sub-accounts.
- Charts:** Multiple technical analysis charts for various assets including GBPUSD, Tesla stock, XAGUSD, and EURUSD.
- Trade History Table:** A detailed log of transactions with columns for Symbol, Ticket, Time, Type, Volume, Price, S/L, T/P, and Profit.
- Order Book/Trade Table:** A table showing current trade details with columns for T/P, Price, Value, Profit, and Comment.

The world's unmatched! "5 Master Accounts" from GIB's Prime Brokerage

- Each floating transaction in the opened account can be viewed instantly through the "MT5 client terminal".
- Each open position of the trade will be showing the name of major retail brokers and liquidity providers who passed the orders into the GIB bank.

AI Arbitrage

AI Arbitrage Artificial Intelligence Trading System

Intelligent trading software is a fully automatic trading software independently developed by our company. It is also a powerful set of programmatic trading tools dedicated to the financial market. It is reported that more than 60% of Wall Street transactions have been completed by robots and algorithms. , The job of a trader in a large company is no longer to watch the market and manually open and close positions, but to program and algorithmize successful trading strategies and put them into the robot trading system for automatic execution. You can automatically place orders and close them without delay. There is almost no delay in the speed of single and closing positions. We use programmatic trading as a means and use AI intelligent trading to make quantitative decisions to achieve profitability.

AI Arbitrage

Although the artificial intelligence foreign exchange automatic trading system cannot guarantee victory in all battles, But due to the integration of the wisdom and experience of many foreign exchange experts, plus strict stop loss and risk control, position control, so there is no excessive trading. There is no emotional trading, no greed and fear that cannot be avoided in manual trading.

Computers can overcome the weaknesses of human nature. Buy when it needs to buy, sell when it needs to sell, no hesitation, no greed, no arrogance if it win, no frustration if it lose, avoiding emotional manipulation.

AI

AI

AI

AI

AI

Because the computer automatically places orders, it can ensure faster order placement and closing speed, and can more sensitively respond to price changes and trends

The computer can monitor the market uninterruptedly 24 hours a day, and automatically enter and exit the venue at the appropriate time and point, completely without manual intervention, allowing you to sleep peacefully at night and engage in other tasks during the day.

Core Technology A.I. Quantitative Technology

GIB currently has more than 150 sophisticated technicians in the whole world managing more than 60,000 BTC. They are specialised in financial product development, asset management, trading, and advanced technology R&D. GIB's quantitative management team has contributed more than 4% of the trading volume in the mainstream digital asset exchange market.

The system is a Mathematical model that adapts trading studies and equips the historical data as a basis. It takes mathematical model, statistical analysis, and programming design as tools by using computer technology to select multiple high potential occurrences that can induce excess returns from immense historical data to formulate trading strategies and integrating super trading programs such as market big data, policies, mathematics, computers, fractal theory, and stochastic processes to achieve stringent risk control, thus it forms the quantified transactions eventually.

**Grid trading technology
to avoid risks**

Grid trading technology for risk avoidance

Grid trading technology for risk avoidance :

Using liquidity provider risk management system and hedge trading bridge to ensure the basis of stable profitability. Reducing risks and drawdowns to a controllable range. Creating a brand new multi-dimensional digital asset ecosystem that is safe, fair, open, shared and a win-win operation.

Grid trading technology for risk avoidance

Grid arbitrage

Grid trading is also known as the “fishing net trading”, it is a type of quantitative trading. It divides the capital into different parts. Then after setting a central price, it performs automated operations on the transaction target. When prices fall, it will buy in stages. When the price rises, it will also sell in stages. The grid trading technology does not rely on human judgment and instead it is fully programmed to take advantage of market fluctuations to buy low and sell high within the grid interval

当前价格 (USDT)	57,229.58	套利次数	303	年化收益率	58.85%

[订单详情](#) [分享](#)

Grid trading technology for risk avoidance

Grid arbitrage

Example: BTC/USDT, price range 55,000-65,000 USDT and grid amount is 99. The amount between each price unit is 100 USDT; If investment amount is 30,000USDT, then the amount between each price unit is 300 USDT, each arbitrage profit will be 0.52.

Arbitrage (Yet to trade)

Current BTC price is 57229.58, buy order is 57100.00 and sell order is 57300.00

Arbitrage (Buy-in at low price)

BTC prices dropped to 57081.26, a buy order is 57100.00 successfully closed, arbitrage program automates opening a sell order set at 57200.00 as buying one order.

Arbitrage (Sold at high price)

The price of BTC rose back to 57254.19, a sell order was successfully closed at 57200.00, and an arbitrage was completed. The arbitrage program then automatically places a buy order at 57100.00, and 57300.00 becomes a sell order

Grid trading technology for risk avoidance — demand pain points

New crypto users :

- 1.It is difficult to obtain even 10% of stable annualized return within traditional finance**
- 2.Digital asset exchange functions are complicated, not focused, unexpected obstructions for newcomers to enter.**

Crypto circle users:

- 1. Grid trading requires aspects such as tools and cumbersome operation of the exchange API**
- 2.Quantitative exchanges gathers too many types of quantitative strategies, causing it to not be streamlined, resulting in invisibly raising the threshold of users**

Exchanges:

- 1. Operation costs too much including server, system and personnel expenditures which amounts to a large sum. Causing the ROI amount to decrease and even causing negative cash flow.**
- 2.Functions and business are homogenized. With stiff competition and capital/liquidity to pour into major exchanges which has caused second-tier exchanges to find it difficult to survive.**

Turning points emerge in all different eras

However, we have grasped the point of this era

At the forefront of the world GIBXChange

1. Adopt: adopting multi-chain technology

2. Establishment: Establish a fully decentralized underlying DEX exchange

3. Development: The DEX developed will utilize the LP Token staking mining model to realize liquidity sharing

4. Synchronization: Synchronization is established at the same time through Uniswap, Sushiswap, ZKSwap, BSC's Pancake, Bakeryswap, Dodo .etc

Centralized DEFI's GUSDT/USDT pool, attracting more DEX liquidity providers to participate

Becoming a place where the Defi market liquidity converges

At the forefront of the world GIBXChange

1. Adopting multi-chain technology: GIBXChange will utilize multichain technology to connect simultaneously,

HECO and more chains, solving Ethereum's high GAS fees and congestion issues.

Advantages:

1

Solving Ethereum's high GAS fees and trade congestion issues

2

Functionality improves as well as user experience

To stabilize the user group and create Better user ecology

3

Cross-chain interoperability, breaking the

"Isolated Island", boosting new growth

4

Creating ecological consensus, high levels of distributed trust and data sharing within the ecosystem

At the forefront of the world GIBXChange

2. Advantages of establishing a fully decentralized underlying DEX exchange:

Assets are fully controlled by users

Assets are received in real-time, which is more efficient and convenient

Transactions are transparent which greatly reduces the cost of trusts between individuals

At the forefront of the G I B X C h a n g e

**Development: The DEX developed will utilize the LP
Token staking mining model**

1.A fairer distribution mechanism that encourages community members to actively participate in governance

2.Provide users with higher revenue

3.Decentralized control and development starting from online, more comprehensive on-chain governance。

GIBXchange

At the forefront of the world

Simultaneously establishing decentralized DEFI GUSDT/USDT pool in Uniswap, Sushiswap, ZKSwap, BSC's Pancake, Bakeryswap, Dodo, etc., to attract more DEX liquidity providers to participate.

GIBXchange At the forefront of the world

GIBXChange firstly provides a large number of major DEX liquidity providers with an opportunity to earn platform governance currency GUSDT. This means that when the liquidity providers complete the GUSDT/USDT liquidity provision in Uniswap, SushiSwap, ZKSwap, etc., With its LP Token, it can also participate in the five major pools of foreign exchange, funds, precious metals, indices, and stocks on GIBXChange's DEX, respectively staking pledge mining, and obtain sub-LPs to enter GIBXChange to exchange for profits.

GIBXchange

at the forefront of the world

In the entire process, GUSDT will serve as the primary governance and staking coin for the platform, and will provide and import huge traffic for it. By then, the price of GUSDT will skyrocket, allowing investors to maximize the profitability

GIBXchange at the forefront of the world

GIBXchange

At the forefront of the world

The emergence of GIBXChange perfectly solves the current three major demands of users on DEX

- ① **Fast transactions**
- ② **Lowest cost**
- ③ **Best prices**

We can see from the recent developments of GIBXChange that these factors are conducive to increasing transaction volume and liquidity. Liquidity and trading volume are one of the core user experiences of an exchange, and are also the core objectives of exchange operations. Therefore, regardless of the perspective, the biggest beneficiary of GIBXChange is undoubtedly GUSDT. The coin listing mechanism will stimulate the active participation of project parties, and any on-chain operation will need to consume GUSDT, which also shows

GUSDT will break through to a new high and become a major winner in crypto in one fell swoop

GIBXChange uses AMM (Automated) Market Maker)

What is AMM?

AMM (Automated Market Maker) , truly accomplishes LP decentralization.

Every user will be able to stake their tokens into the liquidity pools and become a small market maker themselves for GUSDT/USDT currency pair provides traffic, and then enjoys transaction fee bonus (LP bonus), and the liquidity pool funds are controlled by "open-sourced decentralized smart contracts".

GIBXChange uses AMM——known as the most influential DeFi innovation. After Bitcoin and Ethereum, GIBXChange will be the next up and coming

A blockchain innovation exchange that can be called a "paradigm shift"!

The most influential DeFi innovation——AMM

AMM's three characteristics

Decentralised and open

Transparent

Permissionless

01 Decentralized and open :

AMM redefines the concept of "transaction" with mathematical logic, forming a "liquidity injection-liquidity extraction" transaction model. The creation and operation of publicly available on-chain liquidity for a series of different tokens is a major subversion of the "buy-sell" transaction model that has been used since the birth of the financial market.

The most influential DeFi innovation——AMM

Decentralised and open

AMM's three characteristics

Transparent

Permissionless

02 Transparent:

AMM fundamentally changes the way users trade cryptocurrencies. Unlike the traditional order book transaction model, both parties of AMM transactions interact with the liquid asset pool on the chain. It is transparent and visible, and users have the rights to know!

The most influential DeFi innovation——AMM

03 Permissionless :

The AMM liquidity pool allows users to seamlessly switch between tokens on the chain in a fully decentralized and non-custodial manner.

Liquidity providers earn passive income through transaction fees, which are based on the percentage of their contribution to the asset pool.

It is simple, elegant, free to use and most trustworthy

GIBXChange plays an important role in the DeFi field

Low cost of entry to allow more users to participate in the DeFi wave

The staked tokens are automatically matched through the contract, which is designed to cooperate with the hedging strategy of impermanent loss to help users maximize the benefits. For new users, the platform makes it easy towards the direction of increasing the user's single currency type mining revenue and reducing the impermanent loss of LP mining. The most basic improvement lies in the ability to allow users to mine at a lower threshold. Small and medium-sized users can participate in DeFi and get dividends.

Risk Management

The Liquidity of "Dark Pool"

GIB platform has the strictest mechanism in risk management, especially the trading risk control as the platform adapts to the liquidity provider's risk control system and bridge hedging approaches so that the Prime Broker from the upstream and banks can hedge the risk from retail brokers, and the risk management system also functions to monitor the risk orders from retail clients via a variety of strategies and functions.

Through the AI technology, the entered order flow can be analysed and filtered to take over clients' orders with higher loss ratio, thus settles these orders in a steady win fashion by the qualification from the market maker. In contrast, higher-risk trading orders (orders with higher winning ratio) will be allocated to the liquidity pool or the liquidity of dark pool to match the bidding and settlement orders from the higher upstream LP or banks.

CHANGING THE STRUCTURE OF THE FINANCIAL WORLD

GIB will be upgraded directly as a Prime Brokerage

Bringing global investors a brand-new investment experience, developing ground-breaking, subversible financing platform

- **Becoming the largest liquidity provider in the market**
- **Gaining profit from trading with retail brokers and individuals all over the world**
- **Creating wealth with global clients**
- **The digital bank will initiate a one-stop cross-border payment gateway.**

Insurmountable and Sustainable Wealth

The New Liquidity Provider Multi-account Management System “LP MAM” will Revolutionize the 5A Concept

Estimated Monthly Interest: More Than 60% of Net Profit

Estimated Monthly Trading Volume: Over USD 10 billion

According to the research, approximately 90% of the individual account and investors from retail brokers will generally make a loss within 6 months and be expelled from the market.

GIB Digital Bank will showcase "zero latency" and "one-by-one arbitrage transactions" via GIB exclusively owns the innovative AI technology to adapt arbitrage profit attempts in foreign exchange and digital currencies.

By Just Following Our Strides, All Traders Will Be Fully Benefited from Our Trading System and Gain Insurmountable and Sustainable Wealth in Return

GIBXChange Trader Team

Consists of more than over 10 traders from Russia

More than 15 years of fund management experience and currently managing funds exceeding 200 million U.S dollars.

Trading technology

Elliott Wave Theory expected rate of return 15%+

Conservatively estimated monthly returns of 10%-15%

GIBXChange Diversified Profit Model

Transaction fee income

01 **Fee income is one of the important source for digital currency exchanges**, As long as 10,000 people trade 10,000 dollars a day, it can generate 100 million transaction volume and according to fee charging standards, it can generate upto 200,000 dollars worth of stable profits per day including leverage and futures trading which are considered spot-based.

Digital currency financial management

02 **Loans functions same as bank loans financing**, The exchange can earn interest spreads and is basically risk-free because there is collateral. The asset management type can hire a quantitative team by themselves or cooperate with a quantitative team. The current quantitative team can basically provide 10% annual capital protection for large funds, and the excess income will be distributed proportionally. The exchange only needs to issue one asset management product. After users deposit it, they will make a difference in return, which is basically risk-free.

GIBXChange Diversified Profit Model

Coin listing fees

03 **The digital currency market is similar with stock markets**, It is a gathering place of traffic and the credit endorsement of the brand. Therefore, it can acquire large sum of coin listing fees. And with the rise of popular blockchain projects and the global market, currency listing fees is also one of the important sources of income for digital currency exchanges

Large fund pools

04 Due to its convenience, digital currency exchanges are currently the largest fund depositing places, by making use of these fund deposits it is possible to earn risk-free returns. For example, 500 million user assets have been deposited. As long as there is no user panic and operations are normal, generally at least 30% of the funds will remain, that is accounting of users withdrawing and depositing. Therefore, there will always be an available fund pool. For example, if it is 100 million, according to the digital currency risk-free arbitrage of 8%, it can generate 8 million/year income

GIBXChange Diversified Profit Model

Platform coin and public chain ecology

05 Platform coin is an important ecology and source of income for many digital currency exchanges. In the hearts of many digital currency users, the platform currency is a very good investment target because it has the support of platform traffic and strength. It also has its very rich practical value. Generally, exchanges will use 20%~30% of their income to repurchase and burn platform coins, or distribute dividends to give them value. In addition, the application platform currency can also carry out fee discounts, currency voting, ecological governance, as the base currency of platform transactions, increase liquidity, enjoy special activities of the digital currency platform, and pay for activities through the use of platform currency, acting as a fuel for the platform (payment token for transaction fees), etc. In addition, the platform currency can be upgraded to its own main network, thereby further giving the platform currency value and consensus, and its market value will be greatly improved, which is also one of the sources of the exchange's huge profits.

GIBXChange Diversified Profit Model

Important investment layouts

06 The top-ranked digital currency exchanges have their investment departments, and they can often achieve better investment returns than other investors. The reason is that many projects are willing to cooperate with the exchange to provide better investment conditions to the exchange, and the exchange has a certain degree of control over the project party and has its own secondary members, so the exchange has established its own investment department. Explore important tracks around the world, such as Polkadot, IPFS, etc. This year, many second-tier digital currency exchanges can earn tens of millions of annual returns through investment.

Market Maker price differences profits

07 The digital currency market is booming. Another reason is that transactions need to provide liquidity for token transactions. Market making is to provide liquidity. Many digital currency prices have skyrocketed, and exchanges have acted as the driving force behind the scenes. Digital currency trading is a market maker that creates liquidity through continuous buying and selling, acts as a market maker, and earns a business price difference at the same time.

GIBXchange

Soon to enter

NFT

Why enter N F T ?

On February 25th, auction house giant Christie's New York put up an NFT work called "Everydays: The First 5000Days". This item started at a price of US\$100, and was finally sold at a price of US\$69 million after 353 bids.

Why enter N F T ?

A non-fungible token (NFT) is a cryptocurrency token that is indivisible and unique. One NFT cannot be interchanged with another NFT, and the whole cannot be broken down into smaller parts and used. In addition, NFT has a unique identification, which is not interchangeable. The smallest unit is 1 and is indivisible.

NFT Booming Market: A-Share NFT sector soared collectively

Blockchain mining major events

10 years of history for blockchain 1.0

BTC at its peak increased in 26 million times

- **2009: Birth of Bitcoin at the price of just a few cents US Dollars**
- **2013 November: The price of Bitcoin rose to \$1,000**
- **2019 June: Breaking through 10,000 U.S dollars**
- **2020 February, Bitcoin price breaks \$10,000 again**
- **2021 2nd January, Break through 40,000 US dollars**
- **2021 February, Break through 50,000 US dollars**

Blockchain mining major events

**Blockchain 2.0
8 years of history**

ETH at its peak increased in 60 million times

- **2014 April:VITALI released the Ethereum Yellow Paper**
- **2016 May:Record-breaking USD 150 million raised in global crowdfunding**
- **2018 14th January:The valuation of cryptocurrencies has reached its peak, with a daily trading volume of nearly 10 billion U.S. dollars and a market value of 135 billion U.S. dollars.**
- **2019: In the SERENITY version, P05 will complete the operation in Ethereum**

Blockchain mining major events

Blockchain 3.0

IPFS history 5 years? 10 years?

- **Raised US\$186 million in one hour in 2015**
- **Eventually raised 257 million US dollars**
- **Called the largest ICO in blockchain history**
- **Mainnet launch on October 15, 2020**

The background of the image is a nighttime cityscape, likely New York City, with the Empire State Building prominently lit in the center. The lower half of the image is overlaid with a semi-transparent blue-grey rectangle containing text. The text is in white and yellow. The background also features a close-up view of the steel cables of a suspension bridge, possibly the Manhattan Bridge, against a cloudy sky.

Planning for the future in this great trend
GIBXChange is about to enter IPFS mining in the future

IPFS Future Prospects

The central bank of China invested 35 trillion RMB in new infrastructure

5G Infrastructure :

Cloud computing, telemedicine, automated driving, information security, IDC, data services, terminal radio frequency, digital industrialization upgrade, car networking

UHV :

Circuit breakers, UHV transformers, power station monitoring, capacitors
High pressure combination, converter valve, lightning arrester

Intercity high-speed rail: :

Transit rails, construction machinery, signal communication, traction power supply, transportation services, locomotive car bodies, road bridges and tunnels

Big data center :

IT Infrastructures, refrigeration equipment, operation and maintenance services, cloud computing manufacturers, industry applications, third-party services, IDC integration services, dynamic environment monitoring

Industrial Internet :

Network access standards, intelligent manufacturing, scenario applications, network security, interconnection platforms, national new infrastructure facilities nodes

Artificial Intelligence :

Cloud computing, human insurance recognition, visual interaction, universal platform, autonomous driving, Low-level hardware, cloud training, A chip

Electric vehicle charging

infrastructure:Centralized charging and swapping stations, charging modules, new energy, auto manufacturers, charging piles, equipment production, charging platforms, and overall solutions

**New
Infrastructures**

Big players are optimistic about the prospects of IPFS

ipfs前景解读：看懂形势 才能抓住商机

DDS分布式存储生态社区 2020/11/13 19:45 543

IPFS分布式存储行业因其突破性的分布式存储技术而备受关注。随着5g和新基础设施时代的推进，很多人对其投资前景持乐观态度，并开始投资filecoin。今年，随着主网的推出，IPFS受到了前所未有的关注。但需要明确的是，IPFS/filecoin是未来互联网基础设施的一个项目。

IPFS/filecoin通过建立统一的数据交换网络，实现数据的自由流动，打破孤立的数据孤岛，更好地发挥数据的价值。总之，IPFS分布式存储是一项具有长期意义的长期投资，而不是一个短期的黄金项目。

火热的IPFS项目矿机销售争夺战

主网还没上线，价格就一周翻倍了，Filecoin话题全网刷屏，最近FIL走出了独立行情，看这走势图你心动了吗？你是否想要搏一搏单车变摩托。

What is IPFS ?

IPFS

InterPlanetary FileSystem

- **A point-to-point distributed file system**
- **Can store text, picture, video**
- **A content-addressable, versioned storage**

- **A distributed network, peer-to-peer hypermedia protocol**

- **Anyone can rent out the remaining free storage space on their computer. Conversely, anyone who needs storage can also purchase storage space on this network.**

GIBXChange seizes the opportunity to cooperate with well-known big data centers to build mining industry and mine Filecoin

Filecoin values the data of these applications and uses incentive policies similar to Bitcoin.

Policy and economic model to make more and more people create nodes to let more people use IPFS.

Relationship of IPFS and FILECOIN

As long as IPFS is promoted and the more people using IPFS, the more valuable Filecoin will be.

Nine major reasons why Filecoin's market value will surge in the future

● 1st: **Venture Capitals**

Eight top venture capital firms participate in private equity, After going online, the price of the currency will be strongly boosted

● 2nd: **Secondary market**

Filecoin will be listed on regular global exchanges, and fil has become the target of global investors

● 3rd: **Futures market**

Exchanges that list futures must purchase spot Filecoin

● 4th: **Group Buys**

Institutional capital will increase efforts to buy Filecoin for asset allocation

● 5th: **Global seller**

Investors all over the world are paying attention and looking forward to the final launch of Filecoin

● 6th: **Storage requirements**

Governments, companies and individuals must buy Filecoin to get storage space

● 7th: **Stake mining**

Under the stake mining mechanism, miners need to purchase FIL as collateral after the first mine

● 8th: **Miners hoard**

Early miners reluctant to sell a large number of tokens, exacerbating the scarcity of FIL in the market

● 9th: **Miners Resources**

The global mining machine manufacturers and the capital assistance behind them will greatly increase the currency price

GIBXChange seizes the opportunity to cooperate with well-known big data centers to build mining industry and mine Filecoin

Abbreviated as "FIL"

A new type of blockchain that runs proof of time and space. The incentive mechanism tailored for IPFS raised a record of 257 million USDT in just over a month

Total circulation: 2 billion

GIBXChange is about to enter the mining industry and set up a technology supercomputing center, which has many advantages

- **Cooperate with well-known data centers and have many head resources.**
- **Cooperating with the government, the treatment of large-scale miners, low and stable electricity prices.**
- **Has a strong computing power advantage.**
- **Professional operation and maintenance, 24 hours a day throughout the year, to ensure the stable operation of the mining machine.**
- **The barrier to participate is low, saving worry and effort.**
- **Compliance with laws and regulations, tied to the interests of customers**

**In the future, GIBXChange super
computing centers will have
everything that you want**

Comparison of OTC and IPO

Advantages of IPO compared to direct listing

- It can guarantee 100% listing in a shorter time at a very low cost, avoiding the high cost and uncertainty risk of direct listing
- In terms of time, it can be completed in less than two weeks, and the transaction can be completed in less than 30 days.
- In terms of cost, the price of a shell company can be as low as 50,000 to 60,000 U.S. dollars and as high as hundreds of thousands of U.S. dollars, plus attorney fees and audit fees, etc., ranging from 500,000 to 900,000 U.S. dollars. There is about 1.5 million US dollars, and there is no guarantee that it will be successfully listed.

Why choose OTC

01

It can help the company go public in a short time, and provide better sources of funds and support for the company's further development through fund-raising

02

Assist the company to provide high exposure in a short period of time, making it more convenient for future financing

03

The function of the over-the-counter trading system (OTCBB)

Provide more than 3300 kinds of securities:

Including more than 230 participating market makers

Electronic transmission of real-time quotation, pricing and trading volume information of domestic securities, foreign securities and American certificates of presence (ADRs):

Displays the benefits of direct private placements (DPPs) and the trading activities

OTC listing developments

- **There are not only small and medium-sized enterprises listed on OTC, but also well-known multinational companies. Such as BNP Paribas, Imperial Tobacco, British Gas Group BGGGroup, BASF, Air France, Swiss Romania, AXA of France, Heineken of Holland, etc. are all in the U.S. OTC market.**
- **In the first month of 2020, 4 companies in the U.S. OTC market have successfully transferred to the main board market. Affected by the suspension of the US government, this number was 0 in the same period last year.。**
- **The 4 companies that were transferred out were all from the QB sector of the US OTC market, of which 3 were transferred to NASDAQ (NASDAQ), and 1 was transferred to NYSE MKT (American Stock Exchange).**

March into Overseas Digital Currency Trading Market

Dominant Positions of AFF

- Substantial financial strength
- First-rated network security system
- Excellent management team and top cooperative institutions

In 2019, the AFF Trading Platform took the first successful step to take the initiative to obtain a digital asset trading license granted by the Securities and Exchange Commission (SEC) of Thailand, which signifies the legalisation and formalisation of digital asset trading.

Our Exchange Platform will be officially debuting soon to provide local and global users with safe and compliant digital asset trading services.

Future

To build AFF Digital Assets Trading platforms around the world and strive to create a global digital currency services system.

Pioneer in The Cultivation and Production of Medical Cannabis

Becoming a pioneer in the cultivation and production of medical cannabis in Southeast Asia

- To Advance In The 200 Billion Dollar Market
- Cooperation with medical cannabis research and development companies that are licensed by the Australian government
- Treated more than 130 cancer patients
- Received capital injection from more than 5,000 Chinese tourists
- Obtain full support from the Australian Government

watsons

Main Clients

Australia Protected Crops Holdings Ltd, Hong Kong Watson, America Cascadia Blossom, the top 10 legal medical cannabis online-stores in the United States, the Lao Government Hospital, the Thai Military Hospital, and international cancer groups.

Estimated Profit and Revenue Within 3 years

- Medical CBD planting revenue contributes about 100 acres, 2.4 million US dollars per year x 3 years = 7.2 million US dollars
- Earnings revenue from health tourism provides 18,000-unit orders; cancer patients x 3500 US dollars 3.2 million x 3 years ~ 9.6 million US dollars per year
- 20% of the shares of Singapore-listed companies with a market value of US\$1 billion

Combination of Games and Blockchain Technology To Develop Cross-Platform, Diversified Online Games

- Professional game development and management team
- Master the games to meet the expectation of the different market
- Developing cross-industry gaming
- Combine gaming with blockchain technology
- A safer and more balanced gaming experience

Using the decentralisation, transparent, and non-tampering features of blockchain technology, to implement a functional token mechanism on the gaming platform to allow players to play games through tokens and gain token rewards to spend within the GIB's internal ecosystem

GUSDT™ Solid Foundation with Well-Built Value

- An essential component of the AFF system - GUSDT™
- Create the primary value of fiat currency
- Applied in AFF central business circle

Applicability of GUSDT™:

Crypto asset management, crypto-asset loans, exchange ecology, g-mall, payment system, investment in Indonesia's real estate industry and etc.

With reliable infrastructure and dimension of development, AFF keeps the value of GUSDT™ relatively stable in the highly volatile digital currency market to protect users' digital assets and the stability of transactions.

Diversified, High-quality Entertainment Services

- Pouring massive investments in multiple film productions
- Successfully invited A-lists superstars, famous directors, and film industry veterans to participate
- High ROI film and television investment projects
- Debuting online video platform
- 24-hour seamless cross-channel application
- Provide an innovative cultural delivery medium

AFF establishes a diversified entertainment company that integrates original film and television development, independent film production, family leisure entertainment as well as online video services to create a rich and high-quality entertainment experience for users.

Sources of Income

- Brand Sponsorship
- Advertising Spokesperson Fees
- Premiere or Appreciation Event
- Film Equity Transferring
- Film box office dividends
- Viewership rate of online film and television platforms

Safe, Robust, and Cost-effective Private Equity Plan (PPP)

PPP and Bullet Trading Plan to Generate Significant Profits

- The most cost-effective investment method
- Maintain transaction anonymity
- Independent execution of transactions
- Connect with multiple banks
- Simplify payment process, etc

PPP is the **safest trading strategy** in the trading market. With **arbitrage trading**, investors can sell shares option in lower pre-determined prices, while buying shares option with higher pre-determined prices to profit from the price difference.

Unlimited Potential in Gold Mining

- **Collaboration With Powerful Partners**
- **Advanced Gold Exploration and Mining Technology**
- **Safer, higher ROI, suitable for long-term investment**
- **AFF's essential operation — gold exploration and mining**

AFF has established a long-term cooperative relationship with internationally renowned pure gold exploration and development companies. The substantial capability and advanced mining technology have ensured that the quality of gold mines meets the standards which further maintains the company's value and shareholders' equity. It also supports the continuity and stability of profit distribution, bringing steady and highly developed business opportunities.

Acquisition and Listing Strategies to Enhance Competitive Power

- **Initial Public Offering (IPO)**
- **Reverse Takeover Offering (RTO)**
- **Merge & Acquisition (M&A)**

The AFF Group plans to make an initial public offering (IPO) by conducting financing listing with in-depth discussions on various flexibility strategies and assets restructuring plans:

- **Acquisition of companies with cash flow and growth potential**
- **Establishment of Angel Investing**
- **Attracting all ranks of investors and release high ROI**
- **Executing the internal growth and acquisition plans simultaneously**

AFF will strive to establish a sustainable and constant investment return mechanism in return for the support of investors and shareholders.
